

Extended pivots and inserts can be fitted to the multiflex range of chains. Inserts are beneficial for incline or decline applications where the extended pivots can be used for a variety of applications where the product is required to be spaced, held or pushed where the stand alone chain is not sufficient. Both inserts and extended pivots are available in standard arrangements as well as to customer requirements.

Custom dimensions and arrangements available by request.

Turn disc are available for the Multiflex range of chains. Turn discs are used as moving inside wearstrips for turns. By using the turn disc, the chain can go through a curve without significantly increasing the chain tension, consequently, allowing longer conveyors. It is recommended to utilize turn disc for multiflex chains.

Turn disc type	Chain type	Center of disc to center of chain		Weight	
		mm	inch	kg	lbs
