Michal Lubos
Global Product Manager HabaSYNC®

Valentin Daniljuk
Product Specialist Timing Belts

1. Reason for the update

A reliable way for customers to get up-to-date assembly instructions was needed. Additionally, the entire process should speed up to avoid worthless waiting time while sending technical guidelines to clients as hardcopy.

Instead of preparing and printing a document with a certain number of pages, a single page document with the link to an online manual was created. An eco-friendly 2-page design was developed providing the English version on one side and German on the other.

With this first prototype for the HabaSYNC® range, we share the desired information with customers using a QR code. The code links directly to the technical document provided online by Habasit.

2. How the update will happen

Assembly manuals were created for accessories as listed:

Designation	Code	SAP material number	
Pin Joint 5	TIB-SMPL-PJ5-AT10	60001854	
Pin Joint 11	TIB-SMPL-PJ11-AT10	60001852	

3. Additional update information

- If there exist different assembly instructions or manuals which are being sent in hardcopy to customers, you can use a new way now: simpler and better – contact the Product Manager for development of new QR codes
- Currently the Pin Joint Assembly Guide is available in German and English (single page with two sides printed), however, there is no issue to create the same document in your local language
