Installation instructions for Control Drive belt types M5290, M5293 and M5296

This installation flyer focuses on the correct installation of a Control Drive belt. Please also consult the general installation flyer for M529X belts.

The installation of Control Drive belts is primarily determined by the modules equipped with teeth. The teeth must engage positively with the cage profiles mounted on the drum. The belt can run either clockwise or counterclockwise.

Clockwise operation (CW)

The flat part of the tooth engages positively with the leading edge of the cage bar on the drum. The spiral drum rotates in a clockwise direction.

Counterclockwise operation (CCW)

The flat part of the tooth engages positively with the leading edge of the cage bar on the drum. The spiral drum rotates in a counterclockwise direction.

Product liability, application considerations

If the proper selection and application of Habasit products are not recommended by an authorized Habasit sales specialist, the selection and application of Habasit products, including the related area of product safety, are the responsibility of the customer. All indications / information are recommendations and believed to be reliable, but no representations, guarantees, or warranties of any kind are made as to their accuracy or suitability for particular applications. The data provided herein are based on laboratory work with small-scale test equipment, running at standard conditions, and do not necessarily match product performance in industrial use. New knowledge and experiences can lead to modifications and changes within a short time without prior notice.

BECAUSE CONDITIONS OF USE ARE OUTSIDE OF HABASIT'S AND ITS AFFILIATED COMPANIES' CONTROL, WE CANNOT ASSUME ANY LIABILITY CONCERNING THE SUITABILITY AND PROCESS ABILITY OF THE PRODUCTS MENTIONED HEREIN. THIS ALSO APPLIES TO PROCESS RESULTS / OUTPUT / MANUFACTURING GOODS AS WELL AS TO POSSIBLE DEFECTS, DAMAGES, CONSEQUENTIAL DAMAGES, AND FURTHER-REACHING CONSEQUENCES.
