Technical data										
Belt slitting width, nominal		Admissible tensile force, open belt		Admissible tensile force, joined belt				Mass of belt (belt weight)		
mm	inch	N	lbf	N	lbf	N	lbf	kg/m	lb/ft	
25.0	0.98	4250	955	2125	478	10625	2389	0.24	0.16	

Maximum belt width (150 mm / 6 inch).

Belt versions with increased thickness are available on request. Please consider larger minimum pulley diameters.

The ultimate tensile strength (or breaking strength) for the widest slitting width mentioned above is 22050 N.

The admissible tensile force always corresponds with a belt elongation of 0.4%. Joined belts are calculated with half admissible force. Please contact Habasit for detailed information and calculations. <u>Link to JDS:</u>

All data are approximate values under **standard climatic conditions**: 23 °C / 73 °F, 50% relative humidity (DIN 50005 / ISO 554), and are based on the Master Joining Method.

Limited representative testing based on a standard configuration is carried out to estimate minimum pulley diameters. Please contact Habasit for specific guidance regarding non-standard applications, including, but not exclusively, when profiles or cleats are used, or if the belt working temperature is close to the limits listed in this document.
